

For school year 2020-21, in the wake of the pandemic, most school districts are implementing approaches like blended learning to provide students a quality and safe educational experience. Blended learning includes a student-centered approach to education that combines online educational materials and opportunities for interaction online with traditional place-based classroom methods. YTN helped **Christ Chapel Academy** in Woodbridge, VA, strengthen its blended learning implementation by supporting development of the school's AR/VR computer lab. The lab showcases state-of-the-art hardware and software applications that provide

hundreds of standards-based, highly engaging, and interactive STEM learning activities that can be provided to students in the classroom or at their homes online.
