

Morning Star Baptist Church, located in Woodlawn, MD, held its inaugural online summer camp and Youth Technology Network (YTN) and partner Cyber Green Group collaborated to provide the virtual camp's cyber security and science training. Campers participated in exercises, activities, and made a game that helped increase their awareness of the many opportunities and risks found in cyberspace. The science program explored physics and how this branch of science enables us to play sports, defy gravity, and even make ice cream! Campers completed various hands on experiments and used the engineering design process to design, build, and test their prototype parachute.
