YTN in support of Archbishop Carroll High School (ACHS) participated in their annual STEM EXPO and Informational Meeting. The event was held virtually. YTN demonstrated an AR/VR application called Franklin's Lab by zSpace. This innovative software application and supporting computer hardware allows teaching the process of troubleshooting while allowing a safe way for students to discover the basics of electrical circuits. YTN staff also participated in a panel discussion of former and current ACHS students about their academic path, goals, and achievements.
