

In the spring of 2022, YTN will make a third visit to Tierra Padre, a village located in Honduras' south central region. In 2020, YTN donated a computer lab to the Padre school. Prior to this, the Padre school had not used computers as a teaching tool. In 2021, YTN donated six additional laptop computers and a video projector to the school. Students at Tierra Padre use donations for STEM learning and to study aerospace engineering. This year, YTN will donate numerous hands-on STEM kits to teach the kids about different science concepts including a study about gravity and centripetal force.
